EDUCATION

University of Toronto

Mississauga, ON

Bachelor of Science in GeoSpatial Data Science & Statistics

Sept 2024 - Present

- Relevant Courses: Machine Learning, Methods of Data Analysis, Spatial Data Science, Probability & Statistics II, Software Design, GIScience

EXPERIENCE

Deep Learning Perception Analyst

Feb 2026 - Present

University of Toronto Formula Racing Team

Toronto, ON

- Annotated 60+ images in Roboflow by drawing bounding boxes around track cones, supporting dataset preparation.
- Labelled 50+ cones across 3 categories, providing object location and class annotations for cone detection model development.
- Reviewed 50+ annotated images and corrected bounding box and classification errors to improve label consistency.

Signal Operator

June 2025 – Present

Canadian Armed Forces

Toronto, ON

- Operated and troubleshooted 20+ tactical radio and data systems while supporting reliable communications in time-sensitive environments.
- Established field communication detachments using 4+ equipment categories, including tactical radios, antennas, generators, and cryptographic equipment.
- Diagnosed and resolved radio communication issues involving frequencies, equipment configuration, and connectivity during field operations.

Mobile Developer Intern

July 2025 - Oct 2025

Surveil.One

Remote

- Developed 20+ Flutter screens for an AI-powered monitoring dashboard, translating product requirements into functional mobile interfaces.
- Integrated GraphQL APIs into the Flutter application to exchange data between the mobile client and backend.

PROJECTS

NBA Space Explorer | *JavaScript, React, Vite, SVG*

- Built an interactive basketball shot chart using React and SVG to visualize shot locations and distinguish made and missed attempts.
- Implemented player and team filters to explore shot distributions and compare scoring patterns across court locations.
- Developed a shot data loading and normalization pipeline and generated a 500-shot sample dataset for demonstrating the application.

NorthStar | *TypeScript, React, Next.js, Mapbox GL JS, GeoJSON*

- Collaborated on a mapping application that uses Toronto crime data to help users compare routes based on travel time and estimated risk.
- Contributed to route scoring supporting 3 preferences: fastest, lowest estimated risk, and a balance of time and risk.
- Helped integrate crime heatmaps and Google Street View into an interactive Mapbox map, allowing users to inspect incidents and surrounding streets.

TECHNICAL SKILLS

Languages: Python, R, SQL, Java, JavaScript, TypeScript, Dart

GIS & Visualization: ArcGIS, Mapbox GL JS, GeoJSON, SVG

Data & Tools: tidyverse, RStudio, Roboflow, Image Annotation

Frameworks & Development: React, Next.js, Flutter, GraphQL, Git, GitHub
